IBM z/OSMF collection

The **IBM zOSMF collection**, also represented as **ibm_zosmf** in this document, is part of the broader initiative to bring Ansible Automation to IBM Z® through the offering **Red Hat® Ansible Certified Content for IBM Z®**. The **IBM z/OSMF collection** supports automation tasks such as configuration management, application deployment, and provisioning on z/OS.

Red Hat Ansible Certified Content for IBM Z

Red Hat® Ansible Certified Content for IBM Z provides the ability to connect IBM Z® to clients' wider enterprise automation strategy through the Ansible Automation Platform ecosystem. This enables development and operations automation on Z through a seamless, unified workflow orchestration with configuration management, provisioning, and application deployment in one easy-to-use platform.

Managed services

Create clusters in the cloud using a managed service.

Offerings		Purchased through	Get started
>	 Red Hat OpenShift Dedicated	Red Hat	Available on AWS and GCP Learn more
>	 Azure Red Hat Openshift	Microsoft Azure	Flexible hourly billing Try it on Azure
>	 Red Hat OpenShift on IBM Cloud	IBM	Flexible hourly billing Try it on IBM
>	 Red Hat OpenShift Service on AWS	Amazon Web Services	Flexible hourly billing Try it on AWS

Run it yourself

Run OpenShift clusters on your own by installing from another cloud provider.

Application Services

Overview

Streams for Apache Kafka >

API Management

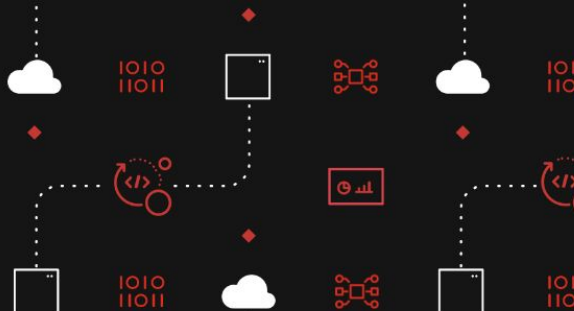

Data Science

Cloud services for managed OpenShift

Red Hat OpenShift Application Services deliver a streamlined developer experience for building, deploying, and scaling cloud-native applications.

Don't miss your chance to preview one of our new application services.

Try OpenShift Streams for Apache Kafka

Reduce operational costs and complexity for application development teams with hosted and managed OpenShift Application Services.

Red Hat OpenShift Streams for Apache Kafka

Development preview

Streams for Apache Kafka enables IT development teams to capture, process, and stream real-time data across hybrid cloud environments.

This service is fully hosted and managed by Red Hat for stream-based applications

Create a Kafka instance

Red Hat OpenShift API Management

General availability

API Management supports application development teams that want to take an API-first approach to building microservices-based applications.

This service is hosted and managed by Red Hat as an add-on for managed OpenShift

Get started

Red Hat OpenShift Data Science

Beta

Data Science provides a fully-supported sandbox to rapidly develop, train, and test containerized machine learning models in the public cloud before deploying in production.

This service is hosted and managed by Red Hat as an add-on for managed OpenShift
